JEFF'S CABIN

OUR HOME GROUNDS

The home of Nick's Nursery did not happen by chance. Before beginning it, a careful study was made of the location, and as we are now about to begin our Fifteenth Year, we are prouder than ever of this spot, with the splendid highway U.S. 60 right here at our front door. We have found little need for advertising, because nearby Louisville has offered us a splendid market for our landscape material.

However, the production end required a bit of study. There was need to examine this soil for what it can and will produce. The surroundings show that a large assortment of trees grow here. To prove this, one need only take a look at a wooded two-acre eastern slope of our Nursery. Those who visit us know that the building in the center of this native growth is known as "JEFF'S CABIN" and is surrounded by thirty varieties of trees. This proves to us that our soil is unusually good for the production of native trees of this locality, likewise of many other localities.

In connection with this, should you contemplate planting some trees, it may be unwise to decide on a variety that you are particularly fond of or have seen growing in the yard of a friend living at a distance. You should inspect your own neighborhood and see what kinds of trees grow best in your locality and soil, and let your selection be governed accordingly.

JEFF'S CABIN

Below is a list of the Native trees surrounding "JEFF'S CABIN".

Acer Dasycarpum, water maple
Acer Saccharum, sugar maple
Aesculus Glabra, Ohio buckeye
Ailanthus Glendulosa, tree of Heaven
